

# Master theses – Analytics

- The use of **analytics** (including ML) to explore and assess software development processes
  - E.g. technical debt, continuous delivery, software architecture,...
  - Working with metrics and visualizations to help teams taking the right decisions
- Collaborations with companies
  - Visma
  - TietoEvry
  - ...
- Interview studies
  - Interview practitioners to get a deeper understanding of a phenomenon
  - Example of very good master thesis: Security Debt (see thesis example on my UiO webpage)
  - More example will be available
