ELITE – Signal Processing and Imaging

CS – Imaging and Biomedical Computing

DS – Digital Image Processing

Course aspects, Research, ... and beyond

13 August 2024

https://www.mn.uio.no/ifi/english/research/groups/dsb/resources/2024-08-13_master-kickoff-dsb.pdf

The Digital Signal Processing and Image Analysis research group (DSB)

(d) Case example 5: ALAX - Aberration correction

DSB group key research areas

- Signal processing & beamforming *e.g., algorithms to generate images from collected data*
- Deep learning & Image processing *e.g., algorithms to make sense of images*

Key applications

- Image analysis in, e.g., remote sensing & medical
- Medical ultrasound
- Sonar
- Infrasound & atmospheric probing

	10 ECTS credits	10 ECTS credits	10 ECTS credits

- Mandatory:**
- STK-IN4300 – Statistical Learning Methods in Data Science
 - IN-STK5000 – Adaptive methods for data-based decision making
- Recommended:**
- IN4310 – Deep learning for Image Analysis
 - IN5310 – Advamced Deep Learning for Image Analysis

Study build-up

- **Don't miss the deadline for registration to teaching & exams!**
- **Study direction compositions:**
 - **ELITE** – Signal Processing and Imaging:
<https://www.uio.no/english/studies/programmes/electrical-engineering-master/programme-options/signal-processing/index.html>
 - **CS** – Imaging and Biomedical Computing:
<https://www.uio.no/english/studies/programmes/computational-science-master/structure/index.html>
 - **DS** – Digital Image Processing:
<https://www.uio.no/english/studies/programmes/datascience-master/structure/>
- **Courses recommended by the Digital Signal Processing & Image Analysis team:** <https://www.mn.uio.no/ifi/english/research/groups/dsb/studies/courses/index.html>

Master's thesis (60 credits)

- **Our research group has weekly MSc sessions with free food!**
- Independent, scientific research
- Corresponds to 1 study year completed by: written thesis, oral presentation & oral examination
- Opportunity to specialize in a chosen research topic
- Recommended course may vary depending on programme option, project, & supervisor

Deadline 1. December!

Study agreement, project description and research plan. For some this can be even ~early October!

- **ELITE students: writing course in early autumn, starting off an MSc project plan**
- **CS students: Essay as first part of MSc**

⇒ **Start looking for a supervisor and Master's thesis topic early!**

Signalbehandling og avbildning

Min master: Hvordan forstå Venus?

Celine Marie Solberg skriver om simulering av jordskjelv på Venus og får samarbeide med NASA.

Celine Marie Solberg. Foto: privat.

Celine fikk høre om masteroppgaven på et informasjonsmøte for IFI-studenter. Hun hadde aldri hørt om denne typen oppgave før, og syntes den virket ny og eksotisk sammenliknet med mange andre masteroppgaver. Det var også motiverende at det var en morsom oppgave som kunne virke spennende for folk utenfor fagfeltet også.

– Jeg tenkte også at det var ganske kult å få samarbeide med NASA!

Presented her work at 1) 47th Scandinavian Symposium on Physical Acoustics, Geilo; 2) American geophysical union, San Fransisco

● Technical Note

HYPOTHESIS OF IMPROVED VISUALIZATION OF MICROSTRUCTURES IN THE INTERVENTRICULAR SEPTUM WITH ULTRASOUND AND ADAPTIVE BEAMFORMING

OLE MARIUS HOEL RINDAL,^{*} SVEND AAKHUS,[†] SVERRE HOLM,^{*} and ANDREAS AUSTENG^{*}

^{*}University of Oslo, Oslo, Norway; and [†]Norwegian University of Science and Technology, Trondheim, Norway

(Received 3 March 2017; revised 24 May 2017; in final form 27 May 2017)

Abstract—In this work, *in vivo* ultrasound cardiac images created with Capon's minimum variance adaptive beamformer are compared with images acquired with the conventional delay-and-sum beamformer. Specifically, we provide three views of a human heart imaged through the parasternal short-axis, the parasternal long-axis and the apical four-chamber views. The minimum variance beamformer produced images with improved lateral resolution, resulting in better resolved speckle structure and improved edges, especially on close investigation of the interventricular septum. These improvements in image quality might possibly improve the visualization of microstructures in the human heart. (E-mail: omrindal@ifi.uio.no) © 2017 World Federation for Ultrasound in Medicine & Biology.

Key Words: Minimum variance beamforming, Capon beamforming, Ultrasound imaging, Cardiac imaging.

Andreas Kleppe viser hvordan databasert bildeanalyse kan brukes i diagnostisering og behandling av mange kreftformer. Her viser han hvordan det tas bilder av et stort antall kreftceller fra hver enkelt pasient Foto: Gunhild M. Haugnes/UiO [Bruk bildet](#).

Bildeanalyse gir mer treffsikker kreftdiagnose

Andreas Kleppe har utviklet en ny metode som presist slår fast hvor alvorlig en kreftsykdom er. Metoden kan brukes på mange kreftformer.

Resources

Water tanks

- 3 water tanks of different sizes
- Positioning systems for sonar and ultrasound field measurements
 - ONDA AIMS III Hydrophone Scanning System
 - Custom-made positioning system for large water tank (2x1.5x1.5 m³)

Ultrasound scanners

- Verasonics Vantage 256 research ultrasound scanner
- GE Vingmed Vivid E95 research and clinical ultrasound scanner

High-performance computing

- Group / Department / Faculty resources
- Granting access to National HPC resources possible

Processing & prototyping

- USTB, Ultrasound Toolbox developed and maintained in collaboration with NTNU & others

Selected projects, array signal processing & acoustic imaging

Ole Marius H. Rindal, PhD 2019, now Postdoc:

- *Software Beamforming in Medical Ultrasound Imaging - a blessing and a curse*
