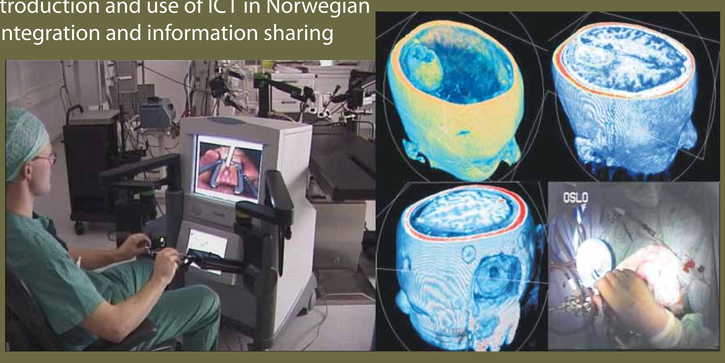
gi

RESEARCH

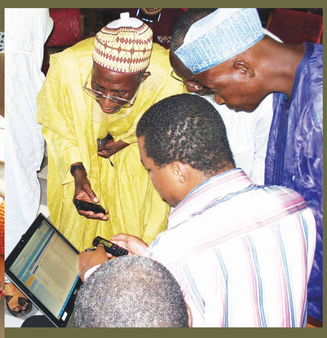
The GI group explores the design and development of large scale Information Infrastructures. To achieve this, we are active in supporting the national Health Information Infrastructures (HIS) in developing countries

APPLICATIONS

In parallel, we study the introduction and use of ICT in Norwegian hospitals, with a focus on integration and information sharing



DHIS2 is recognized as "the worlds' biggest implementation of open-source health information system" with implementations in 20 African and Asian countries



HiSP

Health Information Systems Programme

[www.hisp.uio.no]

Master and Doctoral students in Oslo play key roles in the globally distributed DHIS2 development in the HISP programme

DHIS Mobile - the largest mHealth application in the world - supports 5000 health workers in Punjab, India
